Projects

goodGame | *Full Stack Engineer*

[Live](#) | [GitHub](#)

Platform for tracking board games that allows a user to create shelves and store board game entries

- Incorporates Board Game Geek's database API allowing users to search an extensive database of board games
- Lazily adds API entries to the local database when a user adds an entry to a shelf
- Features full user authentication which integrates the BCrypt gem for password security
- Designed and constructed layout using basic CSS

Chess | *Engineer*

[GitHub](#)

Chess game built in an object-oriented way using Ruby and rendered in the console

- Implements an iterative algorithm to determine a player's possible moves on each turn
- Features a checkmate method which iterates through all of a player's pieces checking for possible moves
